---

Monica,

I attended a steering committee meeting hosted by Crane Engineering on the 3rd and 4th of this month, in which OSHA and CSB were both present. During that time OSHA was continuing there investigation but did not specify when it would be concluded. It appeared OSHA's investigations mainly consisted of interviews of RP personnel and potential witnesses. CSB has concluded most if not all of their site investigation. I can provide POCs for both CSB and OSHA if needed. Crane Engineering, who's the contractor hired by the RP's insurance company, is coordinating with other interested parties (insurance, vendors, attorneys, engineers etc) for further site investigation activities. Crane will also be conducting removal actions of remaining hazmat on and offsite under TCEQs oversight.

Mark and Bob - Craig Haas with OECA called me this morning to see if we had any new updates on West including if we knew if OSHA and CSB were on site or if they had finished their investigation. Know that they said they would share any information they gathered. What is the status of their report development? Know OSHA usually takes several weeks to complete the inspection and finalize their report.

Ragan and Bob - Craig had expressed an interest in having some of their inspectors join the region in conducting our after action inspection. Not sure what the plans are for an inspection since there isn't much left to inspect, however, we could do interviews. Bob please check in with Craig on this issue.
